DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 11 and 13-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 11 and 26-27 recite an image forming device but does not recite an image forming means. Claim 17 recites a revolution number but does not recite a means that obtains this number. Claim 19 recites that the image forming apparatus uses records of image density but does not recite a means that store these records. Claim 25 recites an average printing temperature but does not recite a means to obtain this temperature.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Application/Control Number: 10/603,660 Page 3

Art Unit: 2852

4. Claims 11-13, 21, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimazaki et al. (6,134,397) in view of Fujino (JP11-125938a).

Shimazaki et al. teaches a first and second electricity source; a controller for controlling each source; a developing and developing supplying means; wherein the first and second source is controlled based on an inputted density. The potential difference between the first and second voltage are controlled based on the density since both first and second voltages are controlled based on the density. Shimazaki et al., however, also teaches a density detecting means (column7, lines 25-34) but does not state whether this is the density of the image data.

Fujino teaches determining the density data from the image data (abstract). This data is used to control cleaning. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teaching of detecting image density from image data as is taught by Fujino with the image forming device of Shimazaki et al. to obtain an accurate density data.

Response to Arguments

5. Applicant's arguments with respect to claims 11-27 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

- 6. Claim 26 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
- 7. Claims 14-20, 22-25, and 28-29 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Contact Information

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quana Grainger whose telephone number is 571-272-2135. The examiner can normally be reached on M-F 7-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Arthur Grimley can be reached on 571-272-2136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
